## CyberPatriots

In the CyberPatriots Competition of 2020, it was held online. We were forced to undergo the issues of subdued teamwork which is necessary for such a dynamic competition like CyberPatriots. I coordinated most of it by taking all of our team member's available times for the actual competition as well as setting up the online conferences. We had 2 new team members in the team because we had lost 3 of our team members from last year. Cyberpatriots is a somewhat complex system that requires a fair bit of experience to be able to have any sense of mastery. The competition is generally solely technical and remembering things rather than relying on a creative skillset. Up to the days of the beginning of the competition, we held several training rounds where I, along with the little help of other team members, guided both of the new members along the ins and outs of the competition. My persistence to include the new members led to their persistence and excitement to do good in the competition which ultimately led us to place in the Platinum division of the competition in round 3. (top 30%). During the competition, I continuously had the highest score in the images that I did and also did all of the cisco quizzes and tracers while also helping others in their respective images by hopping between the breakout rooms.
